PROFESSIONAL SUMMARY

AI Engineer with 2+ years of experience in building production-ready Generative AI, NLP, Speech AI, and Computer Vision solutions. Proven track record in developing LLM-powered RAG conversational systems and multi-modal document processing pipelines by integrating speech-to-text, OCR, and intelligent automation technologies. Skilled in Python, LangChain, and FastAPI, known for delivering end-to-end AI systems that combine multiple AI domains into cohesive, automated workflows.

TECHNICAL SKILLS

Python, SQL, LLMs, RAG, LangChain, Prompt Engineering, LLM Fine-Tuning, Named Entity Recognition (NER), Sentiment Analysis, Summarization, Text Classification, Whisper ASR, Voice Activity Detection (VAD), Speaker Diarization, Speaker Identification, OpenCV, OCR, Object Detection, Face Detection, Image Similarity Analysis, FastAPI, PyTorch, TensorFlow, Hugging Face, Vector Databases, MySQL, Selenium, BeautifulSoup, API Integration

PROFESSIONAL EXPERIENCE

Mar 2024 – Present | Karachi, Pakistan

AI Engineer – Proxima AI

- Developed end-to-end AI solutions across Generative AI, Computer Vision, NLP, and Speech AI domains.
- Built Speech-to-Text systems using Whisper ASR, VAD, Speaker Diarization, and Speaker Identification.
- Developed OCR pipelines for handwritten, printed, and Urdu text extraction, enabling comprehensive document extraction and automated data ingestion.
- Built RAG-based conversational systems using embeddings, vector databases, LangChain, and LLMs.
- Fine-tuned AI models and deployed scalable APIs using Python and FastAPI.
- Developed automation and data collection pipelines for multimedia and web platforms.
- Designed and orchestrated end-to-end AI workflow pipelines, coordinating data ingestion, model inference, and API services to automate multi-component processes.

PROJECTS

AI Broadcast Intelligence System

Jan 2026 – Present

- Built an AI-powered platform for live news analysis using OCR, Speech-to-Text, Face Detection, and NLP.
- Developed RAG-based conversational search over news transcripts and headlines using embeddings and vector databases.

Medical Slip Duplicate Detection System

Jan 2025 – Mar 2025

- Developed document classification, OCR extraction, and image-text similarity matching for duplicate medical slip detection.
- Combined visual and textual analysis to generate duplicate similarity reports.

Smart Startup Assessment

Oct 2024 – Jan 2025

- Built an AI-powered startup evaluation platform that analyzes startup documents and resumes using NLP.
- Generates structured feedback for founders and assists judges in reviewing multiple startups efficiently.

EDUCATION

Mohammad Ali Jinnah University
Bachelor of Software Engineering

Karachi, Pakistan | Feb 2020 – Feb 2024

CERTIFICATIONS

- Hugging Face – LLM Course
- Hugging Face – Agents Course
